

John Adeleke

Backend Engineer (Go / TypeScript/python) | Distributed Systems | Fintech & Real-Time Systems

Lagos, Nigeria

SUMMARY

Backend Engineer with 5+ years of experience building scalable, secure, and high-performance systems. Specialized in Golang and TypeScript (NestJS) with strong expertise in distributed systems, real-time communication, and financial transaction integrity. Proven track record of designing and deploying production-grade systems serving 10,000+ users with high reliability and data consistency.

CORE SKILLS

Languages: Go (Golang), TypeScript
Frameworks: NestJS, Express
Architecture: Microservices, Event-driven systems
Real-Time Systems: WebSockets, ACK protocols
Concurrency: Goroutines, Mutex, Channels
Databases: PostgreSQL, MongoDB, Redis
Security: JWT, HMAC, Idempotency
DevOps: Docker, CI/CD

PROFESSIONAL EXPERIENCE

Backend Engineer/Flutter Mobile Developer – Contract(May 2025 - present)

Courier Marketplace Platform (Logistics System)

- Architected a distributed logistics marketplace using Go and NestJS microservices, improving system scalability by 70%
- Built real-time tracking system using WebSockets, reducing delivery status latency to <1 second
- Designed escrow-based payment flow, ensuring 100% transaction integrity between riders and users
- Implemented ACK-based messaging protocol with retry logic, improving message delivery reliability to 99.9%
- Developed dynamic pricing negotiation system, increasing successful order matches by 40%

- Enforced strict role-based validation, reducing invalid system events by 90%
- Designed package lifecycle system with clear state transitions, reducing processing errors by 60%

Spectrum Microfinance Bank ->Backend Engineer/Flutter Mobile Engineer - Fulltime(July 2025 - present)

USSD Banking Application (Microfinance)

- Solely built and deployed a production USSD banking platform serving 10,000+ customers
- Implemented idempotency safeguards, reducing duplicate/inconsistent transactions by 99%
- Applied mutex locks and concurrency controls, eliminating race conditions in transaction processing
- Designed fault-tolerant transaction flows, improving success rate under poor network conditions by 35%

Role-Based Transaction System (Business Banking)

- Built secure backend system supporting business financial operations
- Implemented fine-grained RBAC, improving data access control accuracy by 95%
- Designed secure APIs using JWT authentication, reducing unauthorized access incidents to near zero
- Ensured financial integrity using atomic database operations, eliminating partial transaction failures

PROJECT HIGHLIGHTS

- Independently designed and deployed multiple production backend systems
- Consistently improved system reliability, achieving 99.9% uptime across services
- Specialized in building secure, scalable financial and real-time systems from scratch
- Leveraged AI-assisted development tools (ChatGPT, Copilot) to accelerate debugging and implementation, improving delivery speed and reducing defects

EDUCATION

Bachelor of Technology (B.Tech)
Tower Polytechnic, Nigeria

Computer Science (BSC)
University of The People
