PROFESSIONAL SUMMARY

Flutter Mobile Engineer with 5+ years of experience building scalable, secure, and high-performance mobile applications, with a strong focus on fintech and real-time systems. Proven ability to independently design and deliver production-grade mobile apps including banking authenticator systems, logistics platforms, and enterprise tools. Skilled in clean architecture, state management, and performance optimization.

CORE SKILLS

Mobile: Flutter, Dart

State Management: BLoC, Riverpod

Architecture: Clean Architecture, MVVM

Real-Time: WebSockets, Firebase Cloud Messaging

Authentication: Biometric Auth, OAuth, JWT

Backend Integration: REST APIs, GraphQL

Tools: Firebase, CI/CD, Git

AI-Assisted Development: ChatGPT, Copilot (debugging, code generation, testing)

PROFESSIONAL EXPERIENCE

Flutter Mobile Engineer – Spectrum Microfinance Bank

July 2025 – Present

- Independently built a **banking authenticator app** for secure transaction approvals (OTP/approval flow)

- Developed an **internal mobile app** for creating and managing customer accounts
 - Redesigned onboarding flows for **new and existing customers**, improving usability and reducing friction
 - Implemented **bill payment features**, including validation and transaction handling
 - Integrated secure APIs ensuring **consistent and reliable financial operations**
-

Mobile & Backend Developer – AppFur Software (Contract)

Mar 2025 – Oct 2025

- Developed cross-platform Flutter applications using clean architecture, improving maintainability
 - Built responsive UI for B2B and B2C applications
 - Integrated Firebase Cloud Messaging for real-time push notifications
 - Connected mobile apps to secure backend APIs with efficient data handling
-

Mobile & Backend Developer – SOSTA APP

Sep 2024 – Jan 2025

- Engineered Flutter applications using BLoC and Riverpod for scalable state management
 - Implemented secure authentication (Biometric login & OAuth)
 - Integrated WebSockets and push notifications for real-time user interactions
 - Automated CI/CD pipelines, improving deployment efficiency
-

Mobile Developer – Pegasus Medical (Remote)

Aug 2024 – Mar 2025

- Developed healthcare-focused mobile interfaces with improved accessibility
 - Integrated Firestore for real-time data synchronization
 - Optimized API interactions, improving app performance and response times
-

PROJECT HIGHLIGHTS

Courier Marketplace App (Logistics Platform)

- Built Flutter mobile app supporting **real-time delivery tracking using WebSockets**
 - Implemented live location updates and event-driven UI for order lifecycle
 - Integrated dynamic pricing and rider-user interaction flows
 - Designed responsive UI for booking, tracking, and managing deliveries
 - Improved user experience with low-latency updates (<1s perceived delay)
-

Fintech Mobile Systems

- Delivered secure mobile solutions for **transaction approval, onboarding, and payments**
 - Focused on **data integrity, secure authentication, and seamless UX**
-

Engineering Impact

- Built and deployed multiple production-grade Flutter applications independently
 - Specialized in **real-time and fintech mobile systems**
 - Leveraged AI-assisted tools (ChatGPT, Copilot) to accelerate development and reduce bugs during implementation
-

EDUCATION

Bachelor of Technology (B.Tech)
Tower Polytechnic, Nigeria

Computer Science (BSC)
University of The People

- Achieved <2s transaction approval latency with optimized API handling
- Reduced transaction processing errors by ~25% via improved validation flows
- Improved onboarding completion rate by ~40% through UX redesign
- Built a secure banking authenticator app used for transaction approvals, reducing fraud risk by ~30%
- Improved user engagement by ~35% with live tracking and notifications
- Reduced delivery status latency to under 1 second using WebSockets
- Supported 1,000+ simulated concurrent users with stable real-time updates
